Admin Category Product Link Extension for Magento2 by Mavenbird

Admin Category Product Link Extension User Guide

Content

Introduction

- In the context of e-commerce platforms or content management systems (CMS), the "Admin Category Product Link" is a specific feature or section of the admin interface designed to facilitate the management of product categories. This link usually directs administrators to a dashboard or page where they can perform various tasks related to product categorization and organization.

Categories
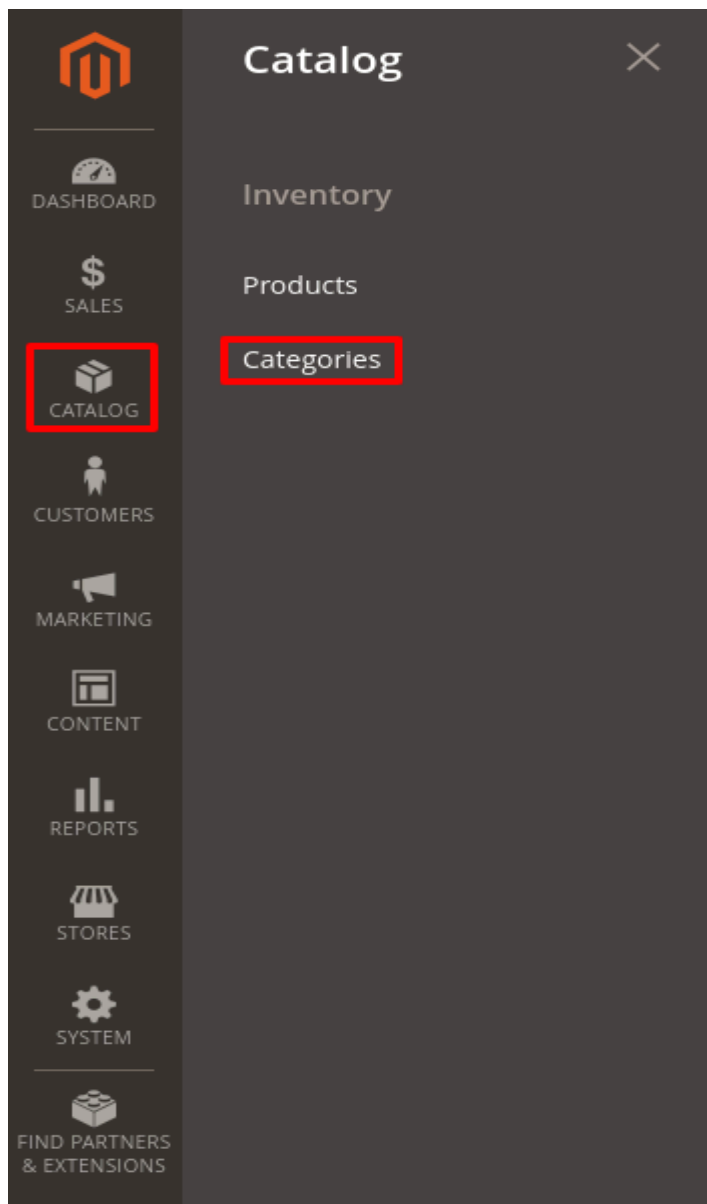

Category Products
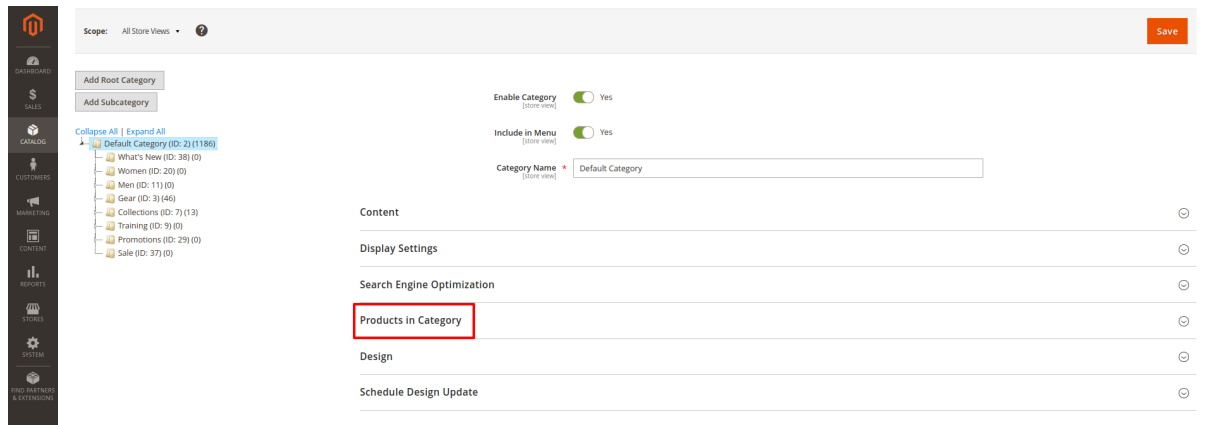

First of all click on Catalog → Categories → Product in Categories. Then Check Edit Link for Direct Edit the Product

- Category in Product : -

  When you click the "Product in Category" button, you are redirected to a list of multiple products within that category.
  However, direct editing of the products from this list is not possible. To address this, an "Edit" link needs to be created, allowing administrators to directly access and modify individual product details.

Edit Link

- **Direct Access**:-

     Multiple "Edit" links are provided for each product in the list, allowing administrators to quickly navigate to the specific product they need to update.

- **Efficiency**:-

     This approach streamlines the editing process by reducing the number of steps required to access and modify product details.

- **Improved Workflow**:-

     By enabling direct redirection to the product's edit page, administrators can make changes more efficiently without having to search for or manually select products.

- **Enhanced Usability**:-

     The provision of individual "Edit" links improves the overall user experience by making it easier to manage and update products directly from the category view.

- **Instant Updates**:

  Administrators can make changes to product details such as price, description, and stock levels directly from the edit page. Once modifications are made, they can be saved instantly, ensuring that the product information is always up-to-date.

- **Efficient Saving**:

  After updating product information, changes are saved with a single action, minimizing disruption and allowing for quick updates. This feature ensures that product details are promptly reflected in the catalog.

- **Real-Time Changes**:

  Edits are applied in real-time, so any updates made to product attributes are immediately visible on the front end. This ensures that customers see the most current product information without delay.
